

A History of Innovation in Safes and Electronic Locks

American Security Products (AMSEC) is the world's best-known provider of security safes and security solutions. We protect the assets of our clients throughout the world by providing a broad array of security safes and consulting services with the highest degree of quality, integrity, and responsiveness. AMSEC began in the late 1940s and was the pioneer of round-door vaults, which served as the industry standard for decades.

AMSEC was the first domestic company to obtain Underwriters Laboratories' coveted TL15 and TL30 burglary rating on a high-security composite safe. The flagship of AMSEC's high-security safes is the Amvault. Its composite construction offers more resistance to cutting tools and torch attacks than a traditional steel-plate safe.

We offer the industry's most extensive product line of UL-listed fire-resistant safes, fire-resistant data safes, B- and C-rated safes, depository safes, and UL-listed TL-15 and TL-30 high-security safes. We pride ourselves on our ability to solve the physical security challenges and develop practical solutions for our customers.

Quality Design and Service

The quality of an AMSEC safe starts with our design. The design of each AMSEC safe draws on over sixty years of

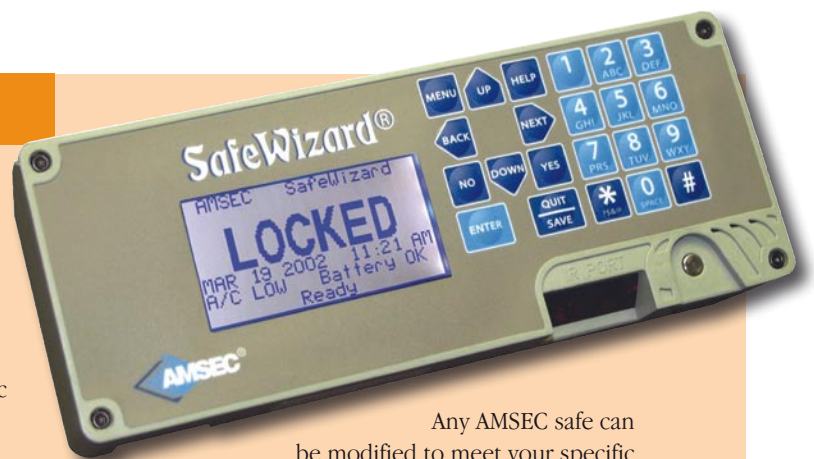

experience of protecting the physical assets of our customers. There aren't many criminals with over sixty years of experience, so we think that gives us the advantage. We maintain the highest standards of fit and finish in the industry. Before the AMSEC name is attached to each safe, the safe must undergo a rigid 28-point inspection.

We think the number one reason you should purchase your safe from AMSEC is our service. AMSEC has installed more than 500,000 safes worldwide. Our 200,000 sq. ft. corporate service center in Fontana, California, is staffed with highly trained technicians who are available 24 hours a day, 365 days a year, to answer questions and help solve problems with any safe shipped anywhere in the world. Our field support team is made up of over 7,500 factory-certified technicians. In most cases we can have someone at your location within hours.

Electronic Locks

In addition to safe design and construction, AMSEC is also a leader in the development and implementation of electronic locks. We offer both third party and our proprietary control systems. These have integrated features, such as time delay, distress codes, multi-user codes, audit trail, alarm system interface, and many others.

The AMSEC SafeWizard® is a state-of-the-art electronic product for use in controlling and auditing access to safes. The SafeWizard continues to evolve, and now features exception reporting. Get an instant response from the SafeWizard via email if any problems arise. In addition, fingerprint recognition, an IR port for easy audit downloads to a pocket PC, and remote connectivity make the SafeWizard a truly exceptional product.

Any AMSEC safe can be modified to meet your specific security needs. Our vast experience allows us to meet our challenges in a timely and cost-effective manner. Businesses throughout the world have relied upon AMSEC to solve their unique cash management and security needs for years. ■
