

ADT Retail Solutions Give You the Edge to Succeed.

Tough Times Demand Tighter Security.

In the retail world, your security challenges never end. Furthermore, you can't win in today's economy with yesterday's retail security systems.

Every retailer faces a unique set of security challenges. At ADT® Retail Solutions, we understand there is no single security system or "one size fits all" approach for all retailers. That's why we offer a full spectrum of retail security solutions.

Electronic Article Surveillance (EAS)

ADT's EAS systems are built around the world's most effective anti-shoplifting technology—Sensormatic® Ultra•Max®. With the highest detection rate in the industry, it allows for wide-exit coverage, reliable deactivation, and virtually no false alarms.

Exception-Based Reporting

ADT offers retailers exception-based reporting and performance management solutions that will help you achieve your profit targets faster and easier. Retail Expert Profit Navigation Systems, based on the NaviStor®/Point-of-Sale platform, offer a full suite of loss prevention tools to tackle shrink.

- **NaviStor® Platform.** Gives you unprecedented control over losses by providing business intelligence about your point-of-sale transactions.
- **NaviTrack Platform.** Provides business intelligence associated with direct store delivery inventory and in-store inventory transactions.
- **NaviScript® Platform.** A powerful tool for improving pharmacy profits.
- **NaviGuest™ Return Authorization.** A proactive return-authorization and exception-reporting system that makes accurate return decisions easier to make and policies easier to follow.
- **NaviCase®.** Allows users to document and monitor all types of liability and loss claims in one streamlined, easy-to-navigate database.

Video Surveillance

ADT offers a full spectrum of video products designed for all aspects of your business, including operations, merchandising, and loss prevention.

ADT SelectSM managed services provide four distinct security services; all with the single ability to help improve your operations.

- **ADT Select Link.** This alert notification system can spread vital emergency or routine news quickly and accurately. Our innovative, advanced web-based technology can help broadcast messages to telephones, cell phones, email, digital pagers, fax machines, and wireless PDAs. The system can be accessed through an Internet browser and requires no dedicated server or software installation.
- **ADT Select Vision.** This system works by enabling easy video access to multiple locations through a single web browser. You can view live or recorded video, control recorders and cameras, and save video to local hard drives, in addition to sharing video by emailing links and comments. The result can be greater control over business procedures, operational efficiencies, and the bottom line.
- **ADT Select DataSource.** This product makes it possible to have secured access to time and date stamps from your ADT security system through the web. Exception and regular alarm activity, such as late-to-close, early-to-close, late-to-open, and early-to-open, are current and easy to access. In addition to having web access to your system activity, you can run customized reports and create links to them for faster ongoing access. You can choose to view security activities for one site or several sites.
- **ADT Select Entry.** This system can give you the ability to help manage the access of your employees to protected points of entry in each of your facilities. Multiple locations can be controlled simultaneously and in real time, all through one web browser.

A Trusted Partner

Trust in the experience and expertise of your dedicated ADT retail team. Each member is backed by years of experience in the specific challenges facing retail security. And the whole team is supported by ADT's service excellence.
