

## Kenstan Customizes Solutions

Since 1963, Kenstan Lock Company's goal has been to provide the highest level of quality, service, and reliability in the industry. Quite often, this means coming up with innovative solutions to unanticipated problems. Custom work is where we excel and distinguish ourselves from the competition. Our in-house engineering and machining capabilities permit us to respond quickly to special customer requests.

Recently, we were contacted by our vendor partner Abloy Security, Inc., an ASSA® ABLOY® Group company, on behalf of a mutual customer, Design and Production (D&P).

Located in Lorton, Virginia, D&P was in the midst of building new showcases for a prestigious museum in Chicago. The original plans called for an ABLOY® Plunger Lock to secure the cases. However, since these were not typical cases, they required an atypical lock. Kenstan recommended replacing the standard 1/2-inch ABLOY® plunger tail with a new customized 4-inch tailpiece made from 303 stainless steel [see photo below]. Using our unique customization capabilities, we were able to meet the client's specific security needs quickly and without further case modification.

### Snap Bolt Series

The introduction of Kenstan's Snap Bolt Series, featured below with the ASSA® Desmo keyway, is another example of our ingenuity in addressing our client's security needs. Many endusers were looking for an alternative to the typical spring bolt drawer/door lock which can be shimmed open, and at times,

difficult to install. Kenstan designed the Snap Bolt Series that combines the convenience of a spring bolt lock with the security of a dead bolt. The Snap Bolt is much easier to install and much more secure than the typical spring bolt since it is shim resistant. This series is offered in ABLOY®, ASSA® Desmo, Medeco®, and other manufacturer keyways. ■
